

1 Use the included cleaning kit to degrease the windshield thoroughly. Position and stick the Pals sensor as high as possible with its cable up and behind the roof's part.

2 Use the flat orange tool to push the cable along the windshield and the dashboard intersection.

3 Position the switch to • Push it forward then rotate to the right till it stops whilst maintaining it pushed, then pull it towards you. Disconnect the switch from its cable.

4 Use the flat orange tool to unclick/remove the dashboard side panel. Route the PALS plug and the remain of the cable through the side opening towards the switch aperture.

5 Connect the PALS plug between the connector and the switch. Lock the switch back in place via rotating the command to the left. You may now enjoy your enhanced car !
